

## REVISED APPENDIX FIVE- FREQUENCY OF LITTER QUANTIFICATION SURVEYS

The **Litter Quantification Survey** is undertaken annually, between the months of March and December, by each local authority. Once the minimum requirement has been met, the authorities may conduct additional surveys at their own discretion, as often as they require. Each survey, which takes approximately 20 minutes to complete (excluding travel time), involves the counting of all of the litter items occurring within a 50m stretch of roadway or footpath. The minimum number of surveys required of any local authority was 4 and is now 12, whereas the maximum was 15 and is now 45. The results of the survey will be logged on a standardised form, and the national results analysed and reported upon by the Litter Monitoring Body.
